Host cells containing vectors comprising the HSCD nucleic acid may be used to produce the HSCD enzyme, according to standard recombinant DNA methodology. The enzyme may then be used as an antigen in the production of antibodies or in assays to identify antagonists of HSCD activity. These antagonists may then be used to treat disorders associated with inappropriate expression, or over activity of HSCD such as immune disorders and concers (the antagonist interferes with the reaction between pyruvate and coenzyme A). For example, the antagonists may be used to treat leukemia, lymphomas, adenocarcinomas and cancers of the breast, lung, testis, prostate and brain, Addison's disease, acquired famune deficiency syndrome (AIDS), asthma, anemia, Crohn's disease and craves disease. The nucleic acids and antisense sequences can be used in gene therappy.

cc which represent the human ORFX open reading frames 1 to 3161. The ORFX cy sequences have activities such as: cytostatic; hepatotropic; vulnerary; cc antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; antiparkinsonian; nootropic; hepatotropic; vulnerary; cc antipsoriatic; antiparkinsonian; nootropic; neuroprotective; cc antipsoriatic; antiparkinsonian; nootropic; neuroprotective; cc antipsoriatic; hypotensive; dermatological; humunosuppressant; cc antipsoriatic; hypotensive; dermatological; humunosuppressive; dermatological; humunosuppressive; cc antihyroid; and antimaemic. The sequences can be used for determining cc antihyroid; and antimaemic. The sequences can be used for determining cc pathological conditions associated with an ORFX-associated disorder. The notelic acids can be used to express ORFX proteins in gene therapy cretors. The proteins and nucleic acids may be used to treat cancers, coroliferative disorders, neurodegenerative disorders, osteoarthritis, cg graft vs host disease, cardiovascular disease, diabetes mellitus, cc graft vs host disease, cardiovascular disease, diabetes mellitus, cc appertension, hypothyroidism, cholesterol ester storage, systemic lupus erythematosus, severe combined immunodeficiency (SCID), AIDS, viral, cc allergies, aplastic anaemia, burns, wounds, bone and cartilage damage, conocturnal haemoglobinuria, antiinflammatory disease; to enhance cc cagulation; to inhibit thrombosis; and as a contraceptive.

                                                                                                                                                                                        This invention relates to purified human proteins AAB81047 - AAB81056 which are encoded by cDNA sequences AAF77476 : AAF77485. The invention includes an expression vector which can translate DNA encoding the protein or express it in a cell. Also included is a cell transformed by the vector, and an antibody specific for the protein. The protein can be used for the detection of receptors and ligands and in the screening for new low molecular weight drugs. The present sequence represents the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 δÃ
AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                             Nucleic acids encoding 35 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cc Parklisons's disease), cognitive disorders, schizophrenia, asthma, CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, kidney disorders, CC gastrointestinal disorders, pregnancy related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound to the sting and epithelial cell proliferation, to prevent skin aging due to construct of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used a food additive or preservative to modify storage properties.

CC anithodies specific for a protein of the invention can be used in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked CC immunosorbent assay (ELISA). The present sequence represents a human xxx entered protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Query Match

cc and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene cc therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the camount of the new protein in a sample or by determining the presence of cc and include developing products for the diagnosis or treatment of the can include developing products for the diagnosis or treatment of cp proliferative disorders, cancer, tumours, foetal and developmental cambormalities, haematopoietic disorders, diseases of the immune system, abnormalities, neurological disorders (e.g., Alzheimer's disease, cardiovascular disorders (e.g., Alzheimer's disease, cardiovascular disorders, programs), sepsis, diabetes, atherosclerosis, cardiovascular disorders, pregnancy-related disorders, asthma, cc disorders, and infections. The proteins can also be used to aid wound culture of primary tissues, to regenerate tissues, to identify their constated lyands or binding partners; and in chemotaxis, and can be used in diagnostic immunoassays e.g., radiominoassay of the invention can be used in immunoassay (ELISA). The present sequence represents a human cc immunoassay (ELISA). The present sequence represents a human cc immunoassay (ELISA). The present sequence represents a human cc immunoassay (ELISA). The present sequence represents a human cc immunoassay (ELISA). The present sequence represents a human cc immunoassay (ELISA). The present sequence represents a human cc immunoassay (ELISA). CC amount of the new genes. Specific uses are described for each of the CC 2 genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC altergies, neurological disorders (e.g., Alzheimer s disease, CC garkinsons's disease), cognitive disorders, schizophrenia, asthma, CC skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC cardiovascular disorders, angiogenic disorders, schizophrenia, asthma, CC disorders, and infections. The proteins can also be used to aid wound CC dealing and epithelial cell proliferation, to prevent skin aging due to constiture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties. CC alleviating symptoms associated with the disorders mentioned above, and CC indiagnostic immunosasay (ELISA). The present sequence represents a human CC secreted protein fragment referred to in the disclosure of the invention.

                                                         CC to the 5602 nucleotide sequences defined in the specification, where the complementary strand of a polynucleotide which comprises one of coligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5 end complementary to the complementary strand of a polynucleotide which comprises a 5 end complementary to a combination of complementary strand of a polynucleotide which comprises a 3 equence complementary to a coligonucleotide which comprises a 3 equence, where the coligonucleotide comprises at least 15 nucleotides and the combination of complementary full length comprises as selected from those defined in the specification. The primers are useful for synthesising polynucleotides, content of the specification and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs assily without any specialised methods. AAH03166 to AAH13628 and comprises to a content of the component of the comp
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Ota T,

                                                                                                                                                                  The invention relates to gene encoding D-arabinitol dehydrogenase, isolated from Bacilius sp. IKD-SA868 strain. The protein can be expressed by standard recombinant methodologies. D-arabinitol dehydrogenase is used as a clinical diagnosing agent for mycosis. The present sequence represents the D-arabinitol dehydrogenase enzyme.
                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                              Claim 1; Page 10-11; 14pp; Japanese

                              AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the protein in the new genes. Specific uses are described for each of the and include developing products for the diagnosis or treatment of and include developing products for the diagnosis or treatment of

The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and indiagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunoscobent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human; secreted protein; proliferative disorder; cancer; chromosome 14; foetal abnormality; developmental abnormality; haematopoletic disorder; foetal abnormality; haematopoletic disorder; immune system disorder; AIDS; autolmmune disorder; disease; rheumatold arthritis; inflammation; allergy; neurological disorder; Alabetmer's disease; parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psorlasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; ansigned disorder; kidney disorder; kidney disorder; ansigned disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney disorder; kidney di

CC AIDS, autolumne diseases (e.g., rheumatoid arthritis), inflammation, (C allergies, neurological disorders (e.g., Alzheimer's disease, eurological disorders (e.g., Alzheimer's disease, cognitive disorders, schizophrenia, asthma, cc skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc cardiovascular disorders, angiogenic disorders, kidney disorders, cc gastrointestinal disorders, angiogenic disorders, kidney disorders, cc disorders, and infections. The proteins can also be used to aid wound company and epithelial cell proliferation, to prevent skin aging due to culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used cas a food additive or preservative to modify storage properties. CC antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and can dispositic immunoassays e.g., radioimmunoassay or enzyme linked company co AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73448 AAG73448 represent the proteins they encode. AAG73449-AAG73519 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the disgnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, 8 AA; proteins they encode. fragments. The genes

The inventiuseful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB37737-ABB72072).

                                   Rape; leaf; beta-ketoacyl-ACP-ketoreductase; beta-ketoreductase; plasmid pJR16.2; cDNA library; Escherichia coli; vector; plastid; stroma; transit peptide; cassette; antisense; ollseed; transgenic plant; crop improvement; lipid; metabolic engineering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The gluconobacter oxydans gene may be used to transform cells, to produce higher levels of gluconate. Tartaric acid can now be produced without the difficult purification involved in prepn. from tartar.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gluconobacter oxydans

A plastid stroma targeting transit peptide is present. DNA encoding the protein may be inserted in a vector or expression cassette in sense or antisense orientation for expression in an oilseed plant, e.g. for production of transgenic rape plants with low or modified oil content, diversion of metabolism to alternative storage compounds, e.g. starch, protein or engineered polymers, or production of plants with enhanced oil content. The DNA may also be used as a probe to obtain similar genes from other plants. The transit peptide may be used to direct other proteins to leaf

Query Match Best Local S Matches Rape; seed; beta-ketoacyl-ACP-ketoreductase; beta-ketoreductase; plasmid pJRS10.1; cDNA library; embryo; Escherichia coli; vector; plastid; stroma; transit peptide; cassette; antisense; oilseed; transgenic plant; crop improvement; lipid; metabolic engineering; polymer; rapeseed oil. A plastid stroma targeting transit peptide is present. DNA encoding the protein may be inserted in a vector or expression cassette in sense or antisense orientation for expression in an oilseed plant, e.g. for production of transgenic rape plants with low or modified oil content, diversion of metabolism to alternative storage compounds, e.g. starch, protein or engineered polymers, or production of plants with enhanced oil content. The DNA may also Claim 1; Page 15; 29pp; WPI; 1996-105914/11. N-PSDB; AAQ99304. 01-FEB-1996 Key Brassica napus Sequence plastids be used as a probe to obtain similar transit peptide may be used to direct The sequence corresponds to a rape seed beta-ketoreductase encoded by a cDNA insert in plasmid pJRS10.1 in Escherichia coli XL1-Blue. New isolated rape beta-ketoreductase DNA - used to develop plants with lower or higher oil contents or with altered oil compsn. The enzyme may then be used as an antigen in the production of antibodies or in assays to identify antagonists of HSCD activity. These antagonists may then be used to treat disorders associated with inappropriate expression, or over activity of HSCD such as immune disorders and cancers (the antagonist interferes with the reaction between pyruvate and coenzyme A). For example, the antagonists may be used to treat leukemia, lymphomas, adenocarcinomas and cancers of the breast, lung, testis, prostate and brain, Addison's disease, acquired immune deficiency syndrome (ALDS), asthma, anemia, Crohn's disease and cancers disease. The nucleic acids and antisense sequences can be used in cancer the sequences can be used in the sequences.

                                                                                                                                                                                                                                                                                                                                     C AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX Sequences have activities such as: cytostatic; hepatotropic; vulnerary; cantipsoriatic; antiparkinsonian; noctropic; neuroprotective; costeopathic; anticonvulsant; antiarthritic; humanosuppressint; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; coantidiabetic; hypotensive; dermatological; immunosuppressive; antibacterial; antiviral; antifungal; antirheumatic; cantitinflammatory; antibacterial; antiviral; antifungal; antirheumatic; cantitinycoid; and antianaemic. The sequences can be used for determining concentration of or predisposition to, or preventing or treating concentrations associated with an ORFX-associated disorder. The concentrative disorders and nucleic acids may be used to treat cancers, conclude; acids can be used to express ORFX proteins in gene therapy concentrative disorders, osteoarthritis, corporative disorders, neurodegenerative disorders, osteoarthritis, corporative disorders, neurodegenerative disorders, osteoarthritis, corporative disorders, combined immunodeficiency (SCID), AIDS, viral, corporative fungal infection, malaria, autoimmune disorders, asthma, concentral or fungal infection, malaria, autoimmune disorders, asthma, concentral or fungal infection, malaria, autoimmune disorders, asthma, concentration, antiinflammatory disease; to enhance

The invention ludes an expression vector which can translate DNA encoding the received for a cell. Also included is a cell transformed by vector, and an antibody specific for the protein. The protein can be of for the detection of receptors and ligands and in the screening for low molecular weight drugs. The present sequence represents the teln product of the human cDNA clone HP00758.

CC proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, CC skin disorders (e.g., psoriasis), sepsis, disbetes, atherosclerosis, CC cardiovascular disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound the alling and epithelial cell proliferation, to prevent skin aging due to comburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC Alleviating symptoms associated with the disorders mentioned above, and can be used in diagnostic immunoassay or enzyme linked CC immunosorbent assay (ELISA). The present sequence represents a human cc secreted protein of the invention.
                  treating or ameliorating medical conditions, e.g., by protein or gene therapy. Pathological conditions can be diagnosed by determining the amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acids encoding 35 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence complementary to the polynucleotide which comprises a 3'-end sequence complementary to its polynucleotide which comprises a 1'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in
                                                                                                                                                                                                                                                                                                                                                                                             29-JUL-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to AAB95893 represent human amino acid sequences; and AAH13629 to AAH13632 represent oligonucleotides, all of which are used in the exemplification
                                                                                                                                                                                     12-NOV-1999;

CC and their corresponding secreted proteins are; useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene C therapy. Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the presence of CC mutations in the new genes. Specific uses are described for each of the CS genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC abnormalities, haematopoletic disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Albachmer's disease, CC akidovascular disorders, pooritasis), sepais, disbetes; atherosclerosis, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, CC gastrointestinal disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC sunburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ilgands or binding partners, and in chemotaxis, and can be used a a food additive or preservative to modify storage properties.

CC alleviating symptoms associated with the disorders mentioned above, and immunosorbent assay (ELISA). The present sequence represents a human CC immunosorbent assay (ELISA). The present sequence represents a human CC secreted protein fragment referred to in the disclosure of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

AAG73449-AAG73519 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene creating or ameliorating medical conditions, e.g., by determining the mean protein in a sample or by determining the presence of conditions in the new protein in a sample or by determining the presence of conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions in the new genes. Specific uses are described for each of the conditions of the inmune gene conditions. The products for the diagnosts or treatment of conditions of instances, pregnancy-related disorders, and the conditions as the conditions. The proteins can also be used to aid wound the conditions and epithelial cell proliferation, to prevent skin aging due to condition to maintain organs before transplantation, for supporting due to condition to maintain organs before transplantation, for supporting cell conducted protein conditions associated with the disorders mentioned above, and conducted immunosorbent assay (ELISA). The present sequence represents a human condition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match

CC protein genes, and AAG73346 AAG73448 represent the proteins they encode. CC AAG73449-AAG73519 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing. CC treating or ameliorating medical conditions, e.g., by protein or gene CC amount of the new protein in a sample or by determining the cCC amount of the new genes. Specific uses are described for each of the CC and include developing products for the diagnosed by determining the cCC and include developing products for the diagnosis or treatment of the abnormalities, haematopoietic disorders, diseases of the immune system, and include developing products for the diagnosis or treatment of CC allergies, neurological disorders, ce.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders, de.g., Alzheimer's disease, cc.g. provided to genes, atheroscierosis, CC allergies, neurological disorders, schizophrenia, asthma, cc.g. providers, angiogenic disorders, kidney disorders, cardiovascular disorders, pregnancy-related disorders, atherosclerosis, CC disorders, and infections. The proteins can also be used to aid wound the pathelial cell proliferation, to prevent skin aging due to contact ligands or binding partners, and in chemotaxis, and can be used to althread additive or preservative to modify storage properties. CC allerylating symptoms associated with the disorders mentioned above, and immunosorbent assay (ELISA). The present sequence represents a human cc. immunosorbent assay (ELISA). The present sequence of the invention.

cc and their corresponding secreted proteins are useful for preventing, ct treating or ameliorating medical conditions, e.g., by protein or gene ct therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the presence of comparison of the new genes. Specific uses are described for each of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the comparison of the compariso

                                        CC AAH32527-AAH32627 represent cDNAs corresponding to 35 human secreted CC protein genes, and AAG73346-AAG73448 represent the proteins they encode. CC AAG73449-AAG73519 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing, CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the presence of mutations in the new protein in a sample or by determining the presence of CC mutations in the new genes. Specific uses are described for each of the CC amount of the new genes. Specific uses are described for each of the CC genes, based on the tissues in which they are most highly expressed, CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC allors autcommune diseases, cancer, the diagnosis of the immune system, CC allergies, neurological disorders (e.g., Alzheimer's disease, asthma, asthma, asthma, asthma, asthma, asthma, asthma, asthma, cCC skin disorders (e.g., psoriasis), sensis, disheres, athercalercies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Matches

                                        disorders, and infections. The proteins can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked immunosorbent assay (ELISA). The present sequence represents a human secreted protein fragment referred to in the disclosure of the invention.

Nucleic acids encoding 35 human secreted polypeptides, useful for preventing, diagnosing and/or treating e.g. cancers, Parkinson's disease and diabetic retinopathy -

Disclosure; Page 47; 604pp; English

AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73448 represent the proteins they encode AAG73449-AAG73449 represent human secreted protein fragments. The genes and their corresponding secreted proteins are useful for preventing,

```
CC treating or ameliorating medical conditions, e.g., by protein or gene CC therapy. Pathological conditions can be diagnosed by determining the CC amount of the new protein in a sample or by determining the CC mutations in the new genes. Specific uses are described for each of the CC and include developing products for the diagnosis or treatment of the CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental CC proliferative disorders, cancer, tumours, foetal and developmental CC alboryless, neurological disorders, diseases of the immune system, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC allergies, neurological disorders, schizophrenia, asthma, CC exin disorders (e.g., psorials), sepsis, diabetes, atherosclerosis, CC gastrointestinal disorders, anglogenic disorders, schizophrenia, asthma, CC cardiovascular disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC culture of primary tissues, to regenerate tissues, to identify their CC cas a food additive or preservative to modify storage properties.

CC alleviating symptoms associated with the disorders; mentioned above, and cc in diagnostic immunoassays e.g., radioimmunoassay or enzyme linked
                                                                                                                                                                                                                                      Sequence

AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, callergies, neurological disorders (e.g., Alzhelmer's disease, allergies, neurological disorders (e.g., Alzhelmer's disease, cognitive disorders, schizophrenia, asthma, cc skin disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, cc cardiovascular disorders, angiogenic disorders, kidney disorders, cc gastrointestinal disorders, pregnancy-related disorders, endocrine cc disorders, and infections. The proteins can also be used to aid wound the company and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell cc culture of primary tissues, to regenerate tissues, to identify their cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties. Cc antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and can include assay (ELISA). The present sequence represents a human cc secreted protein fragment referred to in the disorders of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     amount of the new protein in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the 52 genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of proliferative disorders, cancer, tumours, foetal and developmental abnormalities, haematopoietic disorders, diseases of the immune system,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAH32522-AAH32627 represent cDNAs corresponding to 35 human secreted protein genes, and AAG73346-AAG73448 represent the proteins they encode AAG732449-AAG73519 represent human secreted protein fragments. The genes

and their corresponding secreted protein iragments. The genes treating or ameliorating medical conditions, e.g., by protein or gene camount of the new protein in a sample or by determining the correct the new protein in a sample or by determining the correct the new protein in a sample or by determining the correct to the new protein or gene and include developing products for the diagnosed by determining the correct proliferative disorders specific uses are described for each of the correct tenders, they are most highly expressed, allergies, haematopoietic disorders, foetal and developmental correct tumours, foetal and developmental correct tumours, foetal and developmental correct tenders, diseases of the immune system, allergies, neurological disorders (e.g., Alzheimer's diseases, capitive disorders, diseases, contributed arthritis), inflammation, correct standards disorders, scandards arthritis), inflammation, correct standards and infections. The proteins can also be used to aid wound contribute of primary tissues, to regenerate tissues, to deentify their compate ligands or binding partners, and in chemotaxis, and can be used in diagnostic immunosassays e.g., radioimmunosassay or enzyme linked in disorders mentioned above, and can be used in diagnostic immunosassays e.g., radioimmunosassay or enzyme linked in the disorders mentioned above, and secreted protein fragment referred to in the disorders of the invention.
